Question: 1-1 of 100 Page: 1 of 100

1

A nurse is preparing to administer thrombolytic therapy to a client who had an ischemic stroke. Which of the following is an appropriate nursing action?

- Start the therapy within 8 hr.
- Insert an indwelling urinary catheter after therapy begins.
- Monitor blood pressure every 30 min during the infusion.
- Elevate the head of bed between 25° and 30°.
